QBuild Registration No: 878105

Treatment

Lo-chlor, an algaecide, is effective against green, black, and mustard algae. Here are some steps you can take to use the Lo-Chlor Pool Algaecides:

Super-chlorinate the pool with liquid chlorine (20 litres per 50000 litres of pool).

Add 1 lt of hydrochloric acid for every 10 lt of liquid chlorine used.

Use granular chlorine, such as Lo-Chlor Blackspot 900 or Astral EasyClear, and broadcast. This type of chlorine needs to remain in contact with the surface for at least 12 hours without disturbance.

Brush the pool: Brush the pool walls and floor to attempt to affect the membrane of the algae and expose the roots

Add a specific type of algae, which includes Benzalkonium chloride, such as Lo-ChlorTropical algaecide, Blackspot Algae Killer, and Algae Knock-out.

After cleaning or backwashing the filter, continue running it 24/7 for 2 days. Also, backwash or clean every 2 days for the next week.

Vacuum the pool: Vacuum the pool to waste where possible to remove the dead algae.

Test the water to determine the pH, alkalinity, and chlorine levels.

Balance the water: Adjust the pH and alkalinity to the ideal ranges of 7.4-7.6 and 80-110 ppm, respectively.

Add a Lo-Chlor Pool Algaecide: Add the recommended amount of Lo-Chlor Pool Algaecide to your pool water according to the instructions on the label.
